PROFESSIONALS' FEEDBACK ANALYSIS

Academic Year 2021-2022

1. Introduction

Feedback analysis from Professionals is instrumental in aligning university programs with real-world needs. It provides invaluable insights into current industry trends, skill requirements, and technological advancements. By incorporating this feedback, universities can tailor their curriculum to better prepare students for the demands of the workforce. Additionally, it fosters collaboration between academia and industry, enhancing internship and job placement opportunities for students. Ultimately, feedback analysis ensures that university graduates are equipped with the relevant knowledge and skills to thrive in their chosen fields upon graduation.

2. Objective of the Feedback process

- (i) Provide insights and suggestions to professionals on how they can improve their performance, skills, and practices.
- (ii) Foster open communication channels where professionals can receive constructive criticism and suggestions for improvement.
- (iii) Identify strengths and weaknesses to tailor professional development plans and training programs accordingly.
- (iv) Assess the effectiveness and impact of professional activities, projects, or initiatives.
- (v) Ensure that professionals meet industry standards, regulations, and organizational goals.

3. Methodology for Calculation

The structured questionnaire was developed based on the parameters listed in Table 5.1. Each question is rated on a five-point scale: Excellent (5), Very Good (4), Good (3), Fair (2) and Poor (1). The percentages represent the distribution of responses.

$$\text{Total Weightage} = \sum_{i=1}^5 if_i, \quad 5\text{-scale weightage} = \frac{\text{Total Weightage}}{\text{No. of Responses}}$$

ASSAM
down town
UNIVERSITY

Assam down town University

Established under The Assam Act No. VIII/ 2010, Gazette No. LGL 9/2010/11
NAAC Accredited & UGC 12 (B) Status Holder

The 5-scale weightage provides an average score that helps to summarize the overall quality rating for each question. A 5 point-scale weightage of 4.18 indicates that, on average; the responses are between good and excellent, leaning more towards Good.

Feedback Mechanism for Stakeholders

4. Description about the Variable

4.1 The relevance of the courses in relation to the curriculum.

The relevance of courses in relation to the curriculum is vital for ensuring that each course contributes meaningfully to the overall educational goals. Each course should align with and support the program's outcomes by building necessary skills, knowledge, and competencies in a progressive manner. This relevance ensures that students receive a cohesive learning experience where each course builds on previous knowledge and prepares them for subsequent courses and real-world applications. By carefully designing and selecting courses that complement each other, the curriculum can provide a comprehensive education that is both coherent and impactful, ultimately preparing students for their professional and academic future.

4.2 The necessary information on the curriculum of all programs given in university website.

Providing necessary information on the curriculum of all programs on the university website is crucial for prospective and current students. This information should include detailed course descriptions, program outcomes, and prerequisites for each program. It should also outline the structure and sequence of courses, including core and elective options, to help students understand their academic path. Additionally, information on assessment methods, grading policies, and any experiential learning opportunities, such as internships or research projects, should be included. Clear, accessible, and comprehensive curriculum information ensures that students can make informed decisions about their education and understand the requirements and opportunities available within their chosen programs.

4.3 The competence of the courses related to profession that are included in the program

The competence of the courses related to the profession included in the program is crucial for ensuring that students are well-prepared for their future careers. Courses should be designed to provide both theoretical knowledge and practical skills that are directly applicable to professional settings. This includes incorporating industry standards, current best practices, and emerging trends within the field. Competency-based learning outcomes should be clearly defined, emphasizing skills such as problem-solving, critical thinking, communication, and technical proficiency. Additionally, opportunities for experiential learning, such as internships, co-ops, and projects in collaboration with industry partners, can enhance professional competence. By aligning course content with the demands of the profession, programs can produce graduates who are ready to meet the challenges of their chosen careers effectively.

4.4 The courses in terms of extra learning or self-learning considering the design of the courses

Courses designed with opportunities for extra learning or self-learning enhance students' ability to develop independent learning skills and pursue knowledge beyond the classroom. These courses should include resources and activities that encourage self-directed study, such as supplemental readings, online modules, and interactive tools. Assignments and projects can be designed to allow students to explore topics of personal interest within the course framework, promoting deeper engagement. Incorporating elements like open-ended questions, research-based tasks, and access to academic databases and journals supports this approach. Additionally, providing guidance on effective study strategies and time management can help students make the most of these self-learning opportunities. By fostering an environment that values and supports extra learning, courses can equip students with the skills needed for lifelong learning and adaptability in their professional and personal lives.

4.5 The offering of the value-added course and certificate courses in relation to professional advancement

Offering value-added courses and certificate courses in relation to professional advancement is essential for enhancing students' career prospects and lifelong learning. These courses provide specialized knowledge and skills that complement the core curriculum, often focusing on emerging trends and technologies in the field. Value-added courses can cover topics such as leadership, advanced technical skills, industry certifications, and soft skills like communication and teamwork. Certificate courses, often developed in partnership with industry experts, offer credentials that are recognized by employers and can give students a competitive edge in the job market. By integrating these offerings into the curriculum, universities can help students stay current with industry developments, improve their employability, and support their professional growth and advancement.

4.6 The extent to which the courses help to attain knowledge and understanding of the program and help in developing skills and attitudes

The extent to which the courses help students attain knowledge and understanding of the program, as well as develop skills and attitudes, is a key measure of a curriculum's effectiveness. Well-designed courses should offer a balanced mix of theoretical knowledge and practical application, ensuring that students grasp foundational concepts and can apply them in real-world contexts. This can be achieved through a combination of lectures, hands-on projects, case studies, and collaborative activities. Courses should also be structured to progressively build skills, from basic to advanced levels, across the duration of the program.

ASSAM
down town
UNIVERSITY

Assam down town University

Established under The Assam Act No. VIII/ 2010, Gazette No. LGL 9/2010/11
NAAC Accredited & UGC 12 (B) Status Holder

This includes technical skills relevant to the discipline, as well as soft skills like critical thinking, problem-solving, communication, and teamwork. Additionally, courses should promote positive attitudes such as ethical responsibility, lifelong learning, and adaptability, preparing students to navigate their professional and personal lives effectively.

4.7 The courses in terms of relevance to ensure general skills, practice management, patient care, diagnosis and treatment planning

Courses in healthcare-related disciplines must be meticulously designed to ensure relevance across general skills, practice management, patient care, diagnosis, and treatment planning. General skills courses should impart essential competencies like communication, ethics, and cultural sensitivity, critical for effective patient interaction and collaboration. Practice management courses should cover healthcare economics, leadership, and regulatory aspects to equip students with the knowledge to manage healthcare facilities efficiently. Patient care courses should focus on clinical skills, patient assessment, and preventive care, integrating theoretical learning with practical training to prepare students for real-world clinical settings. Finally, courses in diagnosis and treatment planning should delve into disease pathology, diagnostic techniques, evidence-based treatments, and comprehensive treatment planning strategies, fostering clinical decision-making abilities through case studies and practical applications. This comprehensive approach ensures that graduates are well-equipped with the knowledge, skills, and attitudes necessary to excel in their professional roles and contribute effectively to healthcare delivery and management.

4.8 The adequate up gradation in syllabus/ curriculum done to meet professional standards

Adequate upgrading of syllabus and curriculum to meet professional standards is essential for ensuring that educational programs remain relevant and aligned with industry advancements. This process involves regular review and revision to incorporate new knowledge, technologies, and best practices in the field. Updates may include integrating emerging research findings, adopting new technologies and methodologies, and reflecting changes in regulatory requirements or accreditation standards. Collaborating with industry experts, conducting needs assessments, and gathering feedback from stakeholders are critical in identifying areas for improvement and ensuring that curriculum revisions meet current professional standards. By continually upgrading the syllabus, educational institutions can prepare graduates to meet the evolving demands of their professions, enhancing their employability and ability to contribute effectively to their fields.

4.9 The university in delivering standard curriculum

The delivery of a standard curriculum by a university encompasses several key aspects that ensure quality and effectiveness in education. Firstly, universities must adhere to established academic standards and accreditation requirements to maintain the credibility and recognition of their programs. This involves designing curriculum that aligns with industry best practices, current research, and societal needs. Secondly, effective delivery involves employing qualified faculty who possess both academic expertise and practical experience in their respective fields. Faculty members play a crucial role in delivering curriculum through engaging lectures, hands-on activities, and mentorship. Additionally, universities should provide adequate resources, such as state-of-the-art facilities, libraries, and technology, to support teaching and learning. Moreover, regular assessment and feedback mechanisms help to continuously evaluate and improve curriculum delivery, ensuring that students receive a rigorous and relevant education that prepares them for professional success.

4.10 The curriculum flexibility in online/ offline mode

Curriculum flexibility in both online and offline modes is increasingly important for meeting the diverse needs of students and adapting to various learning environments. In online education, flexibility often involves asynchronous learning options, where students can access course materials and complete assignments at their own pace within set deadlines. This allows for greater flexibility in scheduling and accommodates students with varying personal and professional commitments. Additionally, online platforms can support multimedia resources, interactive simulations, and discussion forums that enhance engagement and understanding.

5. Professional's Feedback analysis:

For professionals, it addressed the need for additions and deletions in the curriculum related to both theoretical and practical components. Their feedback was also sought on the weightage and marks distribution of the syllabus.

5.1 Professionals' Feedback Analysis Report

Table 5.1. Question-wise Professionals' Feedback Distribution on 5-Point Scale

SN	Question's	Excellent	Very Good	Good	Fair	Poor	Total Weightage	Percentage, %	5-Scale Weightage
1	How do you rate the relevance of the courses in relation to the curriculum?	18	6	0	1	0	116	91.67	4.64
2	How do you rate the necessary information on the curriculum of all programs given in university website?	10	14	0	2	1	111	80.56	4.11
3	How do you rate the competence of the courses related to profession that are included in the program?	17	7	0	1	1	116	90.28	4.46
4	How do you rate the courses in terms of extra learning or self-learning considering the design of the courses?	15	9	0	1	0	113	87.50	4.52
5	How do you appraise the offering of the value-added course and certificate courses in relation to professional advancement?	10	13	1	0	0	105	79.17	4.37
6	How do you rate the extent to which the courses help to attain knowledge and understanding of the program and help in developing skills and attitudes?	13	11	0	0	0	109	84.72	4.54
7	How do you rate the courses in terms of relevance to ensure general skills, practice management, patient care, diagnosis and treatment planning?	16	8	0	1	0	114	88.89	4.56

6. Program wise consolidated Report with Justification

6.1. Faculty of Science

Programme	Consolidated Report	Justifications
MSc (Microbiology)	• Enable problem-solving skills through critical thinking. • Create linkage with societal problems and to find appropriate solution.	• Professionals have suggested incorporating research projects as compulsory component in the curriculum wherein respective supervisors should guides students to analyze problems and find appropriate solutions through scientific interventions.
MSc. (Biotechnology)	• Encourage and facilitate internships and industrial visits.	• Many Professionals focused on encouraging and facilitating internships and industrial visits for providing students with practical experience and industry exposure.
MSc (Food Nutrition and Dietetics)	• Additional certificate courses should be encouraged. • Extending internship programs can significantly enhance career prospects for students.	• Majority of the professionals have stated collaborating with online education platforms like Coursera to offer relevant certificate courses and projects. • Extended internships also provide students with extensive opportunities to immerse themselves in diverse tasks and projects as reported by professional.
MSc (Zoology)	• Increasing the focus on practical-oriented classes would be advantageous. • Upgrading laboratory equipment would be more beneficial for students.	• Professionals have suggested that syllabus should include practical components as well as research components and field visit to promote skill-based experimental learning. • The laboratory should be upgraded and new sophisticated instruments have to be installed.
MSc (Botany)	• Internships and industrial visits should be encouraged.	• Majority of the professionals have suggested promoting internships in botany-related industries to

	Additional certificate courses should be encouraged.	provide students with practical experience and exposure to real-world applications. It also responded to organize regular visits to relevant industries and research facilities to help students understand industry practices and technologies.
BSc (Microbiology)	- Internships and industrial visits to be encouraged. - Additional certificate courses may be encouraged.	- Professionals suggested promoting and facilitating internships in various microbiology-related industries to provide students with practical, hands-on experience and exposure to real-world applications. - Organize regular visits to relevant industries and research facilities should be incorporated to help students understand industry practices, technologies, and the work environment.
BSc (Biotechnology)	Facilitate the development of problem-solving skills through critical thinking.	Maximum professionals suggested making research projects as a compulsory component of the curriculum, where students are guided by respective supervisors to analyze problems and devise solutions through scientific interventions.
BSc (Food Nutrition and Dietetics)	Extending internship programs can significantly enhance career prospects for students.	Many professionals recommend extending the duration of internships enables students to engage more deeply with tasks and projects, fostering hands-on experience and facilitating the development of a comprehensive skill set.

6.2. Faculty of Commerce and Management

Programme	Consolidated Report	Justifications
Bachelor of Business Administration	Professionals recommended incorporating more lectures from industry veterans to provide students with real-world insights and inspiration.	These lectures provide real-world insights, practical knowledge, and inspiration, bridging the gap between theory and practice.
Master of Business Administration/ Master of Tourism and Travel Management	Feedback highlighted the importance of instilling ethical values and awareness about corruption in future managers.	Instilling ethical values and awareness about corruption is crucial for students to ensure that they lead with integrity, make responsible decisions, and contribute to a fair and just business environment.
Bachelor of Hotel Management and Catering Technology/ BA (Tourism Management)	Professionals emphasized the importance of cultural awareness and understanding diverse culinary traditions.	Cultural awareness and understanding diverse culinary traditions enrich students' global perspective, fostering respect, empathy, and a deeper appreciation of different cultures.
Master of Business Administration (Healthcare Management)	Professionals suggested more practical exposure to hospital operations and real-world healthcare settings.	Practical exposure to hospital operations and real-world healthcare settings equips students with hands-on experience, enhancing their clinical skills and readiness for the healthcare profession.

6.4. Faculty of Engineering and Technology

Programme	Consolidated Report	Justifications
BTech (Computer Science and Engineering)	Digital learning platforms as MOOCs like COURSERA, AWS and NPTEL courses can be introduced to students.	- Introducing digital learning platforms like MOOCs (e.g., Coursera, AWS, NPTEL) to students expands access to a wide range of high-quality educational resources, allowing them to learn from experts around the world and stay updated with the latest industry trends and advancements. - These platforms offer flexible learning options that accommodate different learning paces and schedules, empowering students to enhance their skills and knowledge independently, thereby complementing traditional classroom education.
Bachelor of Computer Application	Digital learning platforms as MOOC's like COURSERA courses can be introduced to students.	- Introducing digital learning platforms like Coursera to students provides access to a diverse array of high-quality courses taught by industry experts and top universities, enhancing their educational experience and broadening their knowledge base. - These platforms offer flexible and self-paced learning opportunities, allowing students to acquire new skills and knowledge at their own convenience, which can complement their traditional academic curriculum and improve their career readiness.

BTech (Civil Engineering Construction Management)/ BTech (Civil Engineering)	Digital learning platforms as MOOC's courses can be introduced to students.	Introducing MOOCs and other digital learning platforms to students provides numerous benefits that complement traditional educational approaches. It expands access to education, fosters skill development, promotes global collaboration, and prepares students for success in a rapidly changing world.
BTech (Mechanical Engineering)	Students can be introduced to MOOC courses using digital learning platforms.	Students who are exposed to MOOCs and other digital learning platforms reap several advantages that enhance conventional teaching methods. It increases educational accessibility, develops skills, encourages international cooperation, and equips students for success in a world that is changing quickly.
